

# Recursion

**Mohammad Tasin**

# Agenda

- **Recursion**
- **Recursion Tree**
- **Approach to recursive solution**

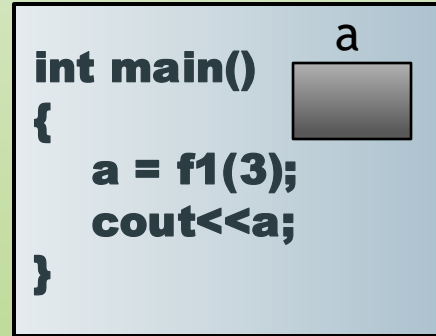

# Recursion

- **Function calling itself is called recursion**
- **A recursive method solves a problem by calling a copy of itself to work on a smaller problem**
- **It is important to ensure that the recursion terminates**
- **Recursive code is generally shorter and easier to write than iterative code**

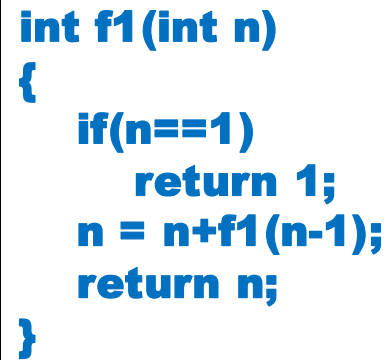

# Recursion Tree

**RAM**

```
int main()
{
    int a;
    a = f1(3);
    cout<<a;
}
int f1(int n)
{
    if(n==1)
        return 1;
    n = n+f1(n-1);
    return n;
}
```

```
int main()
{
    a
    a = f1(3);
    cout<<a;
}
```

```
int f1(int n)
{
    if(n==1)
        return 1;
    n = n+f1(n-1);
    return n;
}
```

# Approach to recursive solution

$n = 5$

1.  $F1(n) \ 1+2+3+4+.....+n = 15$

2.  $n+F1(n-1) \ 1+2+3+4...n-1 = 10+n$

3.  $1 \leq n$

if ( $n==1$ )  
return 1;

```
int F1(int n)
{
    if(n==1)
    {
        return 1;
    }
    return n+F1(n-1);
}
```

Write a C++ program to print first N natural numbers.

**1. PrintN(n) 1 2 3 4 5.....n;**

**2. PrintN(n-1) 1 2 3 4....n-1;  
cout<<n;**

```
If(n>=1)  
{  
    PrintN(n-1)  
    cout<<n;  
}
```
